of sheep ever minered together. John in 1849 elgo) sheep were so one with thom. There are a hundred men-South Wales alone who each awa

One Million Sheep. Think of what a million succe means? Let them weigh too pounds spiece and they would give enough mutten to furnish the United States, and leave enough far in the store from the store of Mr. Mo-the United States, and leave enough far in Irish store for our whole nation next the Sheep King, Says of Vermont far. The word next the Sheep King, Says of Vermont far. the Third States.
All mess sheep are owned by Sumuel Medianghey, an Itishman, who came to Australia in 1856 with practically nothing the failed at first and statical again with a small dock and from your to year has added to the holdings until be has new more abeen than any other man in the world. He has neve series of and than sheep, and black possessions are in the best failtry-sig miles long and facty miles wide. He has delet so the failtness of the Darting Dawns is interpy and black and forty miles wide. He has other stations in New South Wales, and altogether he owns more than a million across and leases about a million or so horse. His calines are fapeed off with wire large great paddooks, in which the sheep across the Pacific to Australia for soles stations in New South Wales, and altogether he owns more than a million across and leases about a million or so horse, the owns more than a million great paddooks, in which the sheep back and brought 102 more sheep, and

Big Prices for Sheep.

(Copyright, 1901, hr Frank G. Carpenter.)
Sidder, Australia.—I had a chat the other day with the sheep king of Australia, the biggest sheep owner of this great slice continent. Australials is the wool set for of the world. It has more than 100,000,000 sheep and it cuis enough woot from their backs to being in \$10,000,000 and anumber of instances have been their backs to being in \$10,000,000 to the same of the largest facts of the deep ever rathered together. July 1800 elsel sheep ever maintered together. July 1800 elsel sheep ever mid from \$1,000 to the largest facts.

The wood upon them would clubbe people of shy one of our cities with exception, perhaps, of New York or cause, and they would amounty produce very near a large transfer of Laries States.

Harms.

Mr. McCaughey believes that the best rams for Anstralian sheep are those from Vermont. There is a large importation of such sheep every year, and there are

from the improvement of your own flock,"

Said I.

"Yes. That's where the money is," ce piled Mr. McClaughey. "I think my cross ing my breeds with the Vermont sheep has added at least a pound of wood per shore about 1,000,000 sneep and on facrease of this kind is aceth a great deal. I have about 1,000,000 sneep and on facrease of this kind is aceth a great deal. I have some sheep which will average seven and a half pounds to the freece, and I think by breeding that I can increase this to fitces peoinds per fleece. I have had slicely which produced as much as forth its pounds of wool at one shearing, shid at one lime we cut fifty two pounds of wool is The sheep are not washed before the pounds from a two. I have distributed the Vermont sheep through my flocks hooft in New South Wales and in Queens land, and the result is a considerable in croase in the cells, swe had entire the sheep which come from a cross of the Vermont and the Australian relain the sheep."

How a \$5000 Sheep Looks. How a \$5000 Sheep Looks.

show. There were in all 700, representing every part of Australia. Four hundred of these were Morino, being in the fine word class, and 300 were fat these ontered, in the scompetition in the class for frosen matten. Every sheep at the show was matten. Every sheep at the show was worth several hundred dollars. Among the latter was Mr. McCampaey's Scoti ram, which took first price. It was a great olders took first price is took of the length word worth of word. They wool came out three works and there were entirely hidden by the wool. In the east were entirely hidden by the wool in the wool came out three inches over its representation of the product in the first of the price is also a difference in through which the creating lay work with a still parts of his parts to the first olders and the price of wool and to the first olders and the price of wool, known by the wool of the states in its through bounds of wool that an apparently wring all offers such that said in the price of wool, known by the wool of the first olders and the price are some of the great wool was at a semial heise in its through bounds with the creating lay wool of the creating lay was allowed the price of wool, known by the wool of the semial parts of the states and Japan come here to bid.

They beyers wear long overalls and lines to be to the they may know. They may know wool was to at the class for the man with the semial stock in order that they may know. They may know which as the price of wool known by accreding to the food as many is 40,000 belon and realised to the first olders of wool known by the wool of the food in In some of the stalis I saw ewes which and thirty pounds of wool on them, and everywhere I heard the praises of our verminal short heard the praises of our themselves of the sheep did not lose their wool from generation to generation in as warm a country as New South Wales. He replay that they did, and that the bringing in or cold-climate sheep, such as "the Verminals," provented this.

The abore owners, or squatters, as they are called, were all well drossed and well educated men. There were hundreds of them at the show. They looked more like

NEW CHURCH OF CHRISTIAN SCIENCE DENOM

For some time past the members of the congregation of the Christian Science denomination, known as the Second Church of Christ, Scientist, whose pigee of working is on Main street, between McKinter and Lamin avenues have felt the necessary of making arrangements for larger quarters, as for several weeks many, were compelled to stand during the services. Accordingly arrangement was made for additional land, and plans draws for the culargement of the present building increasing the senting capacity to about three times what it is at present.

Mesors line & Dunbar have prepared plans and specifications, and the contract for making the improvements has been awarded to Phil H. Wagner. Work will be commenced within the next few days.

The front elevation of the new clurch is shown berewith. It will be located on the present site and will be of frame construction, 28x70 feet. The main entrance will be through an entrance porch and from there to a right and left vestibute coming into the andiferrom, which is strict love, exclusive of the restrum which is in an arched allows. On each side of the above are retiring froms. The side estimates will be at the rear of the andiferrom. The builder of the building is to be limited by gas and electricity and is to have a cove ceiling. The building is to be limited by gas and electricity and is to have an emblement design. The building is to be weather-bonded to the rearise line and the tewers above the cornice line are to be when the proposed to the rearise line and the tewers above the cornice line are to be weather-bonded to the rearise line and the tewers above the cornice line are to be which as to be covered with metal suburies.

The growth of this church can be summed up in a few words. About the middle of May, 1808, a few heliciters in Christian Science association and aft rescient building was constructed. The first service was held these. To September in they have outgrown the present building. SECOND CHURCH OF CHRIST SCIENTIST.
